Installation PC

Download link: http://www.prosanity.com/CPPv4_PC/CPPv4.exe

Installation Steps:

1. Click on link and agree to Run if you have the option or Save the file if you don't or it may just download. (your choice depends on the browser you use).

2. If you get a message that the "file may be dangerous, do you want to discard?", select keep. (Again, slightly different messages if you are using Chrome or Netflix)

3. Double click the file to open it if you do not get the Run message, then select Run.

4. On the message: The Publisher could not be verified. Select Run. If you don't have the option to "Run" select Save. You may get a message that the file is dangerous, etc. Choose Save or Keep.

5. The Setup window shows that CPlotPro will be installed on the C drive. It is best to keep this default name and location for troubleshooting later.

6. Select Next in the Select Shortcut Directory window.

7. Once all settings are selected, select Install.

8. To open the program, double click the shortcut on the desktop.
